

# FLEX CORNER DECK

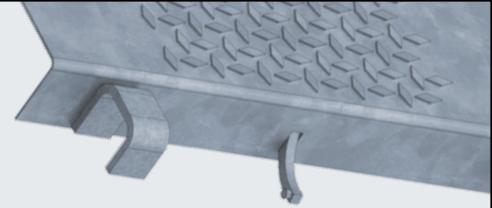

SMART DECKS FROM VERSATILE RINGSCAFF®

EASILY AND SAFELY  
INTERCONNECTED AT CORNERS

We appreciate and live comfortably with curves, even if they are not always easy to build! Fixed corner decks in construction scaffolding, good for normal 45° and 90° corners, are simply not ideal for three dimensional contours such as silos or fuel tanks.

The deck, fabricated as a galvanised steel diamond plate offers a step-less adjustable corner solution up to 45°. Hooks of this corner deck are sensibly positioned not to interfere with the standard (0.73m) deck layout. The cleverly designed flex corner bracket, made of a rugged, durable coupler and a rosette ensures correct and easy erection. This unique accessory is engineered to optimise handling capabilities for flexible corner decks.

**SMART DECKS FROM VERSATILE RINGSCAFF®**

Applications for RINGSCAFF® Flexible Corner Decks are not limited to curves. The corner-rosette also provides excellent usability for more applications such as guardrail extensions.

Scaffolding components are easily and safely interconnected at corners. Moreover, the flex corner bracket is equipped with an alignment design that ensures correct vertical installation and adequate load distribution.

Article Nr.	Description	Weight (kg/lbs)
E04RS1297	Flex Corner Deck	9.2/20.3
E04RS1298	Flex Corner Bracket	2.6/5.7

Some benefits included are:

- Robust and durable galvanised steel
- Flexible up to 45°
- Seamless integration with deck layouts
- Anti-slip surface for safety
- Flex corner bracket can also be used to mount standard ledgers as guardrails
